

## Beast™ Armored Joint Engineered by FlorCon Enhanced Slab Edge Protection for High-Traffic Construction Joints

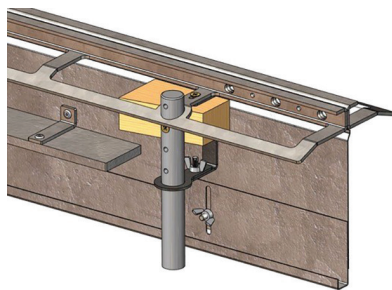

**Engineered Performance, Low Up-Front Cost.** Beast Armored Joint engineered by FlorCon and brought to you by Stego®, is an advanced solution to help protect construction joints in concrete slabs. Engineered for the heavy demands of warehouses, distribution centers, cold storage facilities, manufacturing plants, and high-traffic facilities, Beast Armored Joint combines long-term durability with a streamlined, lightweight, contractor-friendly design.

### Why Concrete Contractors Choose Beast Armored Joint

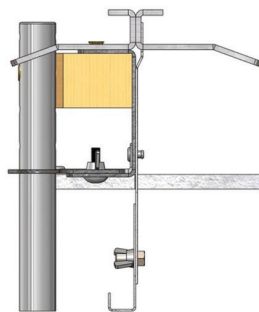

- Lightweight design
- No welding required
- More competitively priced than traditional armored joints
- Efficient installation and ability to set it straight, plumb, and level

### Why Specifiers are Calling for Beast Armored Joint

- More sustainable joint (less steel used)
- Made from galvanized, corrosion-resistant steel
- Lowers building life-cycle maintenance costs
- Improves load transfer
- Rigid construction leads to clean/straight joints

**Beast Armored Joint  
Installation with Stake**

**Pre-pour Condition - Both Sides  
of Beast Armored Joint**

**After Concrete is Placed  
With a Joint Opening of 1/4"**

Beast Armored Joint offers **superior performance** and **easier installation at a lower cost** when compared to other armored joint alternatives - providing installers, specifiers and building owners with **unmatched value**.
