5. INSTALLATION
UNDER SLAB & CRAWL SPACE: Nail or screw through Pango Term Bar, Pango Wrap, and Pango Bond to secure to the adjacent foundation construction (e.g. masonry wall). If the beveled edge is facing the wall, a pocket/lip is created where additional Pango Bond can be applied as needed to create a consistent, continuous seal between the wrap and the foundation construction. Pre-drilled holes are provided every 6” for ease of installation.

To cut Pango Term Bar, score with a utility knife or wire snips. Pango Term Bar can be bent back and forth and then broken at desired locations as well.

Pango Term Bar is flexible enough to bend around corners and contours in the wall for easy installation.

For additional information, please refer to Pango’s complete installation instructions.
